

Doo The Right Thing

STORE IT. COMPOST IT. SPREAD IT RIGHT.

THE PROBLEM:

When livestock stay on wet pastures year-round, repeated hoof action compacts the soil, and rainfall can wash valuable nutrients away before crops can use them. Even responsible owners risk losing the fertility their animals naturally produce.

THE SOLUTION:

Add covered storage to stockpile compost through winter, then spread it during the growing season to save money on synthetic fertilizers while building healthier soil.

Doo The Right Thing

SCOOP IT. BAG IT. BIN IT.

THE PROBLEM:

One gram of dog waste contains 23 MILLION bacteria.
Rain washes it into storm drains & straight to our
creeks. No treatment. No filter.

THE SOLUTION:

Scoop the poop
Use a bag (even grocery bags work)
Tie it tight and bin it
Even in your own yard

Love your pet? Protect our water.

Doo The Right Thing

PACK IT IN. PACK IT OUT.

THE RULES ARE SIMPLE:

Carry more bags than you think you'll need

Scoop the poop

Double bag (if necessary)

Pack it ALL the way out (to a trailhead bin or home)

PRO TIP:

Use a carabiner to clip the tied bag to the OUTSIDE of your pack. No leaks. No smell inside your gear.

Be a trail hero! Leave no trace!
